To:

STIC-Biotech/ChemLib

Subject:

Sequence search of Application No.10/626,126

Please do a standard search on:

(i). SEQ ID NO: 9 against commercial amino acid databases.

(ii). SEQ ID NOS: 6 and 9 against commercial nucleic acid databases.

Thank you very much!

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

encoding New mammalian histamine H4 receptor proteins and polynucleotides the proteins, useful in gene therapy for treating diseases where beneficial to elevate mammalian histamine H4 receptor activity.

Claim 4; Fig 5C; 92pp; English.

The present sequence is that of a cDNA clone encoding a rat histamine receptor of the H4 subtype. The cDNA was isolated from a rat spleen cDNA library. It shows 72.5% homology to the human H4 receptor coding region. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAT70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in

                                                                                                                                                                                                                                                     9
recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the mammalian histamine H4 receptor. Such modulators may be useful for dagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity

The CDNA was isolated from a mouse spleen cDNA library. It shows 72.84 homology to the human H4 receptor coding region. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAMS0564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying

C (GPCRs) and mucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and mucleic acids of the invention, methods of treating, preventing or dispensing diseases c associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR transgene or in an endogenous GPCR gene; calls derived from the transgenic mouse comprising a GPCR transgene or in an endogenous GPCR gene; calls derived from the transgenic mie; kits comprising several mice, each of which has mutation in a different GPCR gene of the invention; and kits comprising a mutation in a different GPCR gene of the invention; and kits comprising a GPCR nucleic acid. The GPCR publication of a which has comprising a GPCR nucleic acid. The GPCR publication of a wide variety of diseases including neurological disorders of the invention of a disease, disease, including neurological disorders of the colon or intestine of diseases including neurological disorders of the colon or intestine of seases including neurological disorders for the colon or intestine of surfacement of adjacrates of the adrenal gland; disorders for the adrenal gland; disorders (e.g., angiana, cardara carhythimia or myocardial infarction); muscular disorders (e.g., angiana, cardara carhythimia or surfacinal pour or osteoporosis); muscular disorders (e.g., angiana, cardara carhythimia or arthritis, gout or osteoporosis); muscular disorders (e.g., angiana, cardara disorders of the kidney, liver, lung, breast, ovary, uterain dal disorders of the kidney, liver, lung, breast, ovary, uterain dal disorders of the kidney, liver, lung, breast, dorthis contests), and disorders of the kidney, liver, lung, breast, and disorders of the present sequence and for this part did on form part of the present sequence and for this predict of the prise of the present dispersion; those sequences of the vidney of proton or or obtained in electronic format directly from W

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                The invention provides an isolated histamine receptor, H4, which binds receptor can be expressed by standard recombinant methodology. Cells receptor can be expressed by standard recombinant methodology. Cells expressing H4 receptor protein at a detectable level can suppress cyclic adenosine monophosphate (CAMP) formation when contacted with the H4 receptor agonist. The H4 receptor and antibodies are used for identifying H4 receptor modulators. Modulation of histamine H4 receptors is useful controlled autoimmuse pathologies such as multiple sclerosis, type I diabetes, rheumatoid arthritis, cognitive and memory defects. The H4 receptor protein and nucleic acids are useful targets to identify drugs that are effective in treating disorders associated with histamine-regulated processes. Identification and isolation of H4 receptor provides for development of screening of molecules that interact with H4 receptors. Centeit variants of H4 can be used to diagnose an H4 associated disease as described above. The H4 receptor polynucleotide is useful to treat or provine a disorder associated with the function of H4 in peripheral blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          420

The present invention describes transmembrane receptors, preferably human g protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB02859 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TTAATGTCCCTGCTTGCTTTTGCTATAACGATAGGCAATGCTGTGGTCATTTTAGCCTTT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a cDNA encoding hRUP7, an endogenous human orphan G protein-coupled receptor (GPCR). The full length hRUP7 cDNA was cloned by RT-PCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signaling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation expression analysis to provide information about their function in healthy and pathological states
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human orphan G protein-coupled receptors and the encoding cDNAs for use in the identification of G protein-coupled receptor agonists.

diseases, allergy and respiratory disease, sensory organ disorders, sleep disorders and hair loss. The PFI-013 protein and mucleic acid are useful in the diagnosis and treatment of the above conditions and also for screening drug candidates for the treatment of diseases associated with signal transduction. The antibodies are also useful for enrichment of eosinophils from mammalian, especially human blood and for detecting the

The PFI-013 protein can be expressed by standard recombinant methodology. Antibodies and modulators of PFI-013 are useful in the manufacture of a medicament for treating allergic disorder, including extrinsic asthma, immunological disorders, such as intrinsic asthma, vasculitic granulomatous disease, interstitial and other pulmonary disease, including chronic obstructive pulmonary bowel disease and neoplastic and myeloproliferative diseases. They are also useful for treating obseity, diabetes, metabolic, neurological diseases, psychotherapeutics, uncapental disease, reproduction and sexual medicine, inflammation, cancer, tissue repair, dermatology, photoageing, skin pigmentation, cancer, tissue repair, dermatology, photoageing, skin pigmentation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New G-protein coupled receptor-like polypeptide, polynucleotide for screening drug candidates for treating diseases associated with signal transduction e.g. allergic, inflammatory, pulmonary, neoplastic diseases.

The invention relates to the human G protein-coupled receptor XXXX

(AAB3621), to CDNA encoding AXXR35 (AAB34006), and to AXXR35 fragments
and variants Like all G protein-coupled receptors. AXXR35 has
and variants Like all G protein-coupled receptors such
transmembrane domains and is involved in signal transduction. AXXR35 has
created to the human histamine H3 receptor. The invention also relates to
as the human histamine H3 receptor. The invention also relates to
capression vectors and host cells comprising AXXR35 bnA, to recombinant
expression vectors and host cells comprising AXXR35 bnA, to recombinant
cxpression of AXXR35, and to an AXXR35-specific antibody. AXXR35 proteins
and nucleotides may be used to treat a wide variety of disorders
and nucleotides may be used to treat a wide variety of disorders
cc including bacterial, fungal, protezoal and viral infections, particularly
HIV-1 or HIV-2 infections; pain; cancers; benign prostatic hypertension;
curinary retention; acute heart failure; hypotension; hypertension; and particularly cellification and delirium, demental, and severe mental
curinary retention; and dyskinesion, delirium, demental, and severe mental
cc pertoris; myocardial inferction; stroke; ulcers; migralne; vomiting;
manic depression, depression, delirium, demental, and severe mental
cc retardation, and dyskinesias, such as Parkinson's disease, Huntington's
disease or dilles de la Toucette's syndrome. AXXR35 proteins and
nucleotides may be used in screening compounds for their ability to
modulate AXXR35 activity or expression. Such AXXR35 proteins, nucleotides are also
cucionately useful for treating asthma, and inhibiting or promoting the
function of lymphocytes, macrophages, cosinophils or neutrophils in
asthmatic lung. AXXR35 proteins, nucleotides and antibiodies are useful for disponsing or determining susceptibility of an inmanial conding gene. AXXR35 incleoting also medical med
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
This sequence represents the open reading frame for a human histamine receptor (HR) designated SP9144. The sequence was isolated by searching databases with the sequence of known G-coupled protein receptor (GCPR). The gene is used for recombinant production of HR and for preparing antibodies (Ab). These Ab are used to purify HR by immunoaffinity chromatography, in immunoassay of histamine receptor, to identify cDNA clones that express the receptor, as antagonist to block binding of histamine (for treating any histamine-associated disorder) and to generate anti-idiotypic antibodies. Agonists and antagonists of the HR protein can be used in the treatment of e.g. inflammation, asthma, allergy, atopic dermatitis, strok, myocardial infarction, migraine, chronic obstructive pulmonary disease, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GACTICITCGIGGGIGTCATCTCCATTCCTCTGTACATCCCTCACACGCTGTTTAACTGG

The present sequence encodes a human histamine receptor. The polypeptide is useful for identifying an agonist or antagonist of a mammalian of statement erceptor. It is useful as an antigen to elicit the production of antibodies. The histamine receptor polypeptide and polymuclectide are useful in the treatment and management of diseases such as inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infection, migraine, chronic obstructive pulmonary disease (COPD), rheumatoon arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP, calcium, inositol phosphate and mitogen activated protein (MAP) kinase), changes in cellular growth rate, secretion of hormones, receptor-stimulated Ca2+
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel mammalian histamine receptor polypeptide useful for identifying agonist or antagonist for treating diseases such as inflammation, asthma, stroke, migraine, rheumatoid arthritis, multiple sclerosis, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 ATGCCAGATACTAATAGCACAATCTTATCACTAAGCACTCGTGTTACTTTAGCATTT

The present sequence is that of cDNA clone pH4R encoding a human histanine receptor of the H4 subtype. The cDNA was isolated from a bone marrow cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histanine H4 receptor nucleic acid molecules (see AANT0980-81) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histanine ligands is demonstrated protein. The pharmacology of known histanine ligands is demonstrated treatment of diseases where it is beneficial to elevate mammalian histanine H4 receptor activity. Recombinant protein is useful for identifying modulators of the human histanine H4 receptor. Such modulators may be useful for disgnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent disbetes mellitus, hyperglycemia, constipation, cardiovascular and cerebrovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
